

Network Programming Lab Report

Year/Semester: III / VI

Index

S. No.	Title	Page No.	Signature
Chapter 2: InetAddress			
1	Check IPv4 and IPv6 Address		
2	Find the address of the local machine		
3	Find IP address and Host name of the local machine		
4	Demonstrate SpamCheck		
5	Compare if domains “www.ibiblio.org” and “helios.ibiblio.org” are the same		
Chapter 3: URLs and URIs			
6	Split parts of a URL (Splitting URL into pieces)		
7	Check supported protocols of the virtual machine		
8	Download a web page of a given address		
9	Resolve relative URIs		
10	Download an object		
11	Demonstrate x-www-form-urlencoded strings		
12	Communicate with Server-Side Programs Through GET		
Chapter 4: HTTP			
13	Block cookies from “.gov” domains using CookiePolicy		
14	Implement CookieStore methods (add, read, delete)		
Chapter 5: URL Connections			
15	Download a web page using URLConnection		
16	Read values of HTTP header fields		
17	Print the entire HTTP header		

18	HTTP Request Method		
19	URLConnection to “nepathyacollege.edu.np”		
20	Get last modified time of a URL		
Chapter 6: Sockets for Clients			
21	Socket Program for Client		
Chapter 7: Sockets for Server			
22	Socket Program for Server		
Chapter 8: Secure Sockets			
23	Create Secure Sockets with tufohss.edu.np		
24	Create Secure ServerSockets and ClientSockets		
Chapter 9: Non-Blocking I/O			
25	List supported socket options for various network channels		
26	Buffer operations (Fill, Drain, Duplicate, Slice, Compact)		
27	Data Conversion		
Chapter 10: UDP			
28	UDP Client		
29	UDP Server		
Chapter 11: IP Multicast			
30	Verify reception of multicast data at a host		
Chapter 12: RMI			
31	Add two numbers using RMI
